

Virender is currently a Principal Scientist – Weed Science & Systems Agronomy, and Deputy Head of Sustainable Impact Platform at International Rice Research Institute (IRRI), Philippines. He also leads the 'Climate-Resilient Farming Systems' Research Unit of IRRI. Virender's R4D program has been centered around five thematic areas aimed at achieving sustainable intensification of rice-based systems and climate change adaptation and mitigation. These include: (1) Integrated weed management program for rice-based systems, (2) Direct-seeded rice (DSR) systems as a sustainable alternative to puddled transplanted rice, (3) sustainable intensification of rice-based cropping systems, (4) climate change adaptation and mitigation, and (5) Big data and analytics for data driven approach in decision making and targeting. Virender has published the results in more than 150 scientific communications, including >75 articles in peer-reviewed international journals.
